Reporting Tool combit List & Label Version 25 Released Reporting with Full Support for .NET Core 3.0

Constance/Germany, 10/24/2019 - combit releases the new versions of its reporting tool for software developers List & Label 25 and the out-of-the-box web reporting solution Report Server 25. In addition to new features and the optimized report designer, List & Label 25 offers full support for .NET Core 3.0. Software developers now benefit from the new features and performance advantages on the latest Microsoft development platform.

With .NET Core 3.0, Microsoft has added support for Windows Forms and WPF as desktop technologies. "This allowed us to fully port our .NET assemblies to .NET Core 3.0 without compromising on functionality," explains Jochen Bartlau, Managing Director of combit GmbH and Development Manager List & Label. Furthermore, List & Label 25 supports new web technologies such as the data provider for GraphQL as an efficient and flexible alternative to SQL. For the electronic exchange of invoices, the update to the ZUGFeRD 2.0 standard is particularly noteworthy.

The report designer has been optimized with a number of new features making it even easier to create great-looking reports. With multi-column layouts, for example, the columns can be filled horizontally with a mouse click or automatically adjusted in width. Another highlight is the linking of data via filter conditions. This allows users to create links quickly and easily, since no programming of relations is required.

As a browser-based reporting solution, the Report Server 25 is included free of charge in the Enterprise Edition of List & Label. Of particular interest are the new import and export functions of the settings. They facilitate redistribution for developers and users by providing easy transfer of users, groups, export profiles, data sources and other elements from one Report Server installation to another. Users of SQL data sources benefit from the possibility to define stored procedures or table-valued functions as data sources.

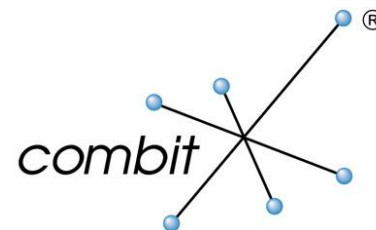

All the details of the new version can be found online at:

www.combit.com/reporting-tool/version-25-list-label-report-server/

List & Label 25 is available in the Standard Edition from EUR 774 EUR and as an upgrade from EUR 464. The Subscription Editions start at EUR 1428 (incl. VAT). A subscription includes service packs, feature updates during the year, upgrades to major releases, and a support flat rate. A free, fully functional 30-day trial version is available for download:

Comprehensive .NET Core 3.0 Support

List & Label supports the latest technologies from Microsoft and offers full support for .NET Core 3.0. New NuGet packages for all assemblies ensure easy integration and distribution. Web applications no longer require compatibility shim. Visual controls for WinForms and WPF can now be used.

GraphQL Data Provider

The modern database query language can now be used directly as a data source for List & Label. It provides an efficient and flexible alternative to SQL – in line with REST and ad-hoc web service architectures.

Support for ZUGFeRD 2.0

The updated standard ZUGFeRD 2.0 is now supported for electronic invoice exchange in PDF format.

Horizontal Fill Mode for Columns

The new function in the report designer allows linked data sets to be output from left to right in a space-saving way in multi-column layouts.

Linking Elements Using Filter Conditions

Until now, links in the report designer had to be defined as relations. With List & Label 25 such relations can be set time-saving and uncomplicated without programming knowledge via a filter.

Automatically Adjust Column Widths

Until now, column widths had to be manually adapted to the content. The result: The columns were displayed with too much free space or breaks. List & Label 25 now optionally calculates the optimal column width.

Importing & Exporting Settings in Report Server 25

The new import and export functions in the Report Server make it possible to transfer users, groups, export profiles, data sources and other elements from one Report Server installation to another.

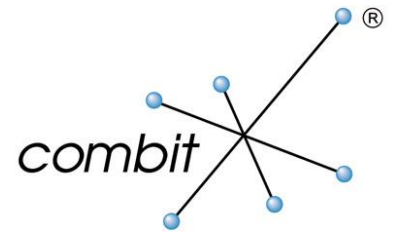

Using SQL Routines

For some supported SQL data sources, stored procedures or table-valued functions can be defined as data sources in Report Server 25.

PRESS RELEASE

Product Description List & Label

Thousands of development teams and millions of end users worldwide use the award-winning Report Generator List & Label. Since 1992 and now in its 25th version, software developers have been adding powerful reporting functions to their List & Label applications. In addition, the Report Generator provides access to all types of data preparation and data exchange - in traditional applications as well as in web reporting and the cloud. Compared to other report generators, List & Label offers the greatest flexibility in terms of evaluable data types, supported programming languages and the number of export and barcode formats. The designer is available in several languages and can be integrated into the application without additional license fees. This allows end users to create reports. The reporting component List & Label from the German software manufacturer combit is available in German and English and is offered in three editions. Subscription variants also include feature updates and a support flat rate.
