### **combit Releases List & Label 26 Reporting Tool: New Version Provides Developers With More Flexibility and Access to New Technologies**

**Constance/Germany, 10/22/2020 – The development of integrated reporting functions for software applications is a very time-consuming process which also devours scarce resources at the involved companies. With List & Label 26, combit has now released a new version of its reporting tool which software developers can easily integrate into their own applications, includes a variety of innovative reporting functions and supports the latest Microsoft technologies.**

Version 26 of the widely distinguished List & Label reporting tool has now been released. Amongst other enhancements in comparison with its predecessor, the Report Designer has been optimized, new output functions have been added and support for the latest .NET technologies has been implemented. Jochen Bartlau, managing director of combit and head of List & Label development, is very satisfied with the results despite all of the challenges faced this year: "We've set the course for the future with List & Label 26. In addition to support for .NET 5, the Report Server has been modernized and converted to the latest .NET Core platform. And thus, we're once again fulfilling our customer promise to constantly stay up to date."

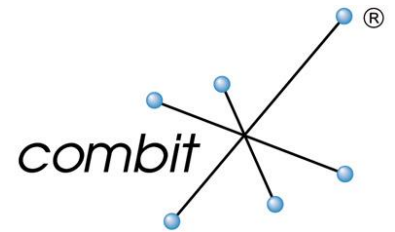

Newly developed designer and output functions offer increased flexibility for the creation of reports. For example, the Report Designer has been enhanced with powerful sub-reports. This makes it possible for users to reuse individual report elements such as charts or tables in other projects. This saves a lot of time where report maintenance is concerned. Two further highlights include the new combination print function which makes it possible to combine different projects into a single print, as well as the multi-pass processing for pre-calculations. This simplifies the insertion of page references, for example.

With the help of the new PDF export function in List & Label 26, users can create smaller export files with better quality, and they're able to select the PDF version as well as higher levels of encryption than before. Beyond this, improved support is provided for international character sets and fonts (Unicode fonts). This also applies to images in CMYK color space and complex vector graphics.

The Report Server in the Enterprise Edition has been ported to the latest .NET Core platform and the interface has been implemented as a single page application with React. Responsive design, performance, speed and operability have been improved as well.

Complete information concerning the new version is available at:

<https://www.combit.com/version-26-of-list-label-report-server/>

#### **Reusable Sub-Reports**

Reusable sub-reports make it possible to reuse individual elements from report containers such as charts or tables in other projects. As a result, the layout only has to be created once and can be maintained at just a single location.

#### **Improved Drag & Drop User Interface for the Table**

The new user interface is easier to use, and more intuitive. List & Label automatically switches to the new view when column width is adjusted. Which cells are affected by resizing and how they change is displayed directly. Furthermore, entire columns can also be moved to another position by means of drag & drop.

#### **Combination Print**

With combination print, different projects can be combined into a single print – including page numbers and tables of contents. In the past, several preview files had to be tediously merged to this end.

#### **Multi-Pass Processing for Pre-Calculations**

The multi-pass procedure can be used to insert references to the page numbers of report elements, for example, even if it hasn't yet been determined on which pages these elements will finally be printed. Different information can also be displayed when printing several editions.

#### **New PDF Export**

The new PDF export function makes it possible to create smaller export files with improved quality. Moreover, enhanced support is now provided for images in CMYK color space and complex vector graphics, as well as for international character sets and fonts.

#### **Support for .NET 5**

List & Label 26 is compatible with Microsoft's newest technologies. In addition to long term support release 3.1 for .NET Core, the reporting component also supports Microsoft's newest Framework .NET 5.

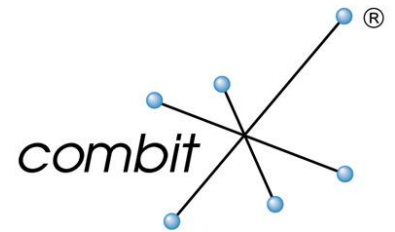

#### **Report Server Based on New Technology**

The Report Server has been ported to the latest .NET Core platform and the interface has been implemented as a single page application with React. The server-based solution has been furnished with an improved responsive design, is more powerful, easier to use and at the same time conserves bandwidth.

#### **New Features for the Ad-hoc Designer**

The Ad-hoc Designer has been expanded to include new filter options and fields of the "Image" type. Furthermore, it's now possible to choose between horizontal and vertical bar graphs for visualization.

Thousands of development teams and millions of end users all over the world use the award-winning List & Label reporting tool. Now in its 26<sup>th</sup> version, software developers have been adding powerful reporting functions to their applications with List & Label since 1992. Beyond this, the reporting tool provides access to all types of data preparation and data exchange – in classic applications as well as in web reporting and in the cloud. As compared with other reporting tools, List & Label offers the highest levels of flexibility with regard to the types of data which can be evaluated, supported programming languages and the number of export and barcode formats. The designer is available in several languages and can be integrated into the application without additional license fees. As a result, users are also able to create reports. Three editions of the reporting component are offered by German software house combit. The subscription variants include feature updates as well as a support flat rate. Installation and documentation are available in German and English.

**The Standard Edition of List & Label 26 is available to first-time users starting at €774, or as an upgrade for as little as €464. The Subscription Editions start at €1428 (all prices include sales tax). Subscriptions include service packs, feature updates during the course of the year, major release updates and a support flat rate. A free, fully functional 30-day trial version is available for download at:**
